Vba excel word save as pdf

Try this Dim objWord As Object Set objWord = CreateObject("Word.Application") 'your code 'here put path \ sheet.cell objWord.ActiveDocument.SaveAs ThisWorkbook.Path & "\" & Sheets("Sheet1").Range("D2") Hi, I got confused by what you were suggesting ... Would it be possible to add the line required at the end of this ... Set wordapp = CreateObject("word.Application") wordapp.Documents.Open "C:\Usersame\Desktop\VAF.docx" wordapp.Visible = True The idea still being that the word document is opened, updates the field links and then saves it self, the name would need to be "VAF.*****" and the * would be a cell (E16) reference. I managed to cobble this together ... 'Auto save wordapp.ActiveDocument.SaveAs "C:\Usersame\Desktop\VAF-" & Sheets("eMail").Range("E16") And it works ... Very surprised at me. In the future, try to put your code, because we don't know how you declared your application. I just put an example: Set objWord = CreateObject("Word.Application") You had to update your code "wordapp" with my example. I see that in the end you made it. I'm glad to help you. Thanks for the feedback. This Word macro will save the ActiveDocument with a new file name that includes the current time: Sub SaveMewithDateNamed() saves active doc in current folder as a filtered html and named upon current time Dim strTime As String strTime = Format(Now, "hh-mm") ActiveDocument.SaveAs FileName:=ActiveDocument.Path & "\" & strTime, FileFormat:=wdFormatFilteredHTML End Sub Create and SaveAs This VBA macro will create a new document and save as using the current date and time: Sub CreateAndSaveAs() 'creates a new doc and saves as a filtered html [In the default folder and named upon current time] Dim strTime As String Dim strPath As String Dim oDoc As Document strPath = ActiveDocument.Path & Application.PathSeparator strTime = Format(Now, "yyyy-mm-dd hh-mm") Set oDoc = Documents.Add 'create a new doc and assign it to oDoc variable 'write some text in the new doc referring to it using oDoc variable oDoc.Range.InsertBefore "Visit oDoc.SaveAs FileName:=strPath & strTime, FileFormat:=wdFormatFilteredHTML oDoc.Close wdDoNotSaveChanges 'close doc End Sub SaveAs PDF This macro will save the Word document as a PDF: Sub MacroSaveAsPDF() 'macro saves pdf either in the same folder where active doc is or in documents folder if file is not yet saved ' Dim strPath As String Dim strPDFname As String strPDFname = InputBox("Enter name for PDF", "File Name", "example") If strPDFname = "" Then 'user deleted text from inputbox, add default name strPDFname = "example" End If strPath = ActiveDocument.Path If strPath = "" Then 'doc is not saved yet strPath = Options.DefaultFilePath(wdDocumentsPath) & Application.PathSeparator Else 'just add \ at the end strPath = strPath & Application.PathSeparator End If ActiveDocument.ExportAsFixedFormat OutputFileName:= strPath & strPDFname & ".pdf", _ ExportFormat:=wdExportFormatPDF, _ OpenAfterExport:=False, _ OptimizeFor:=wdExportOptimizeForPrint, _ Range:=wdExportAllDocument, _ IncludeDocProps:=True, _ CreateBookmarks:=wdExportCreateWordBookmarks, _ BitmapMissingFonts:=True End Sub This function will also Save any word document as a PDF: Sub MacroSaveAsPDFwParameters(Optional strPath As String, Optional strFilename As String) strPath, if passed, must include path separator [\] If strFilename = "" Then strFilename = ActiveDocument.Name End If 'extract just file name without extension If InStr(1, strFilename, ".") > 0 Then strFilename = Left(strFilename, InStrRev(strFilename, ".") - 1) End If If strPath = "" Then If ActiveDocument.Path = "" Then 'doc is not saved yet, we will use default path strPath = Options.DefaultFilePath(wdDocumentsPath) & Application.PathSeparator Else 'use path of active doc strPath = Options.DefaultFilePath(wdDocumentsPath) & Application.PathSeparator End If End If On Error GoTo EXITHERE ActiveDocument.ExportAsFixedFormat OutputFileName:= strPath & strFilename & ".pdf", _ ExportFormat:=wdExportFormatPDF, _ OpenAfterExport:=False, _ OptimizeFor:=wdExportOptimizeForPrint, _ Range:=wdExportAllDocument, _ IncludeDocProps:=True, _ CreateBookmarks:=wdExportCreateWordBookmarks, _ BitmapMissingFonts:=True Exit Sub EXITHERE: MsgBox "Error: " & Err.Number & " " & Err.Description End Sub You can enter the file path and file name to indicate which file to save as a PDF: Sub CallSaveAsPDF() Call MacroSaveAsPDFwParameters("c:/Documents", "example.docx") End Sub For creating and saving the Microsoft Word Document using Microsoft Excel, you need to follow the steps below: Create the object of Microsoft Word Create a document object and add documents to it Make the MS Word visible Create a Selection object with the help of WordObject. Use this Selection object to type the text into the WordDocument. Save the document Create the object of Microsoft Word Set objWord = CreateObject("Word.Application") Create a document object and add documents to it Set objDoc = objWord.Documents.Add Make the MS Word Visible objWord.Visible = True Create a Selection object with the help of WordObject. Set objSelection = objWord.Selection Use this Selection object to type the text into the WordDocument. objSelection.TypeText ("This is my text in Word Document using Excel") Save the Document objDoc.SaveAs ("D:\MyFirstSave") Complete Code: Function FnWriteToWordDoc() Dim objWord Dim objDoc Dim objSelection Set objWord = CreateObject("Word.Application") Set objDoc = objWord.Documents.Add objWord.Visible = True Set objSelection = objWord.Selection objSelection.TypeText ("Saving this file after this text") objDoc.SaveAs ("D:\MyFirstSave") End Function Let's say you have time sheet data for the employees, in each of the sheets and you want to save each sheet as a separate Word file. Check out the image below. Let's see how this will be done. Copy, Paste and Run the code below in a VBA module. This method Saves each of the worksheets of current 'Excel file as individual Word File using Excel VBA Sub SaveEachSheetAsWordFile() Dim strFolderPath As String Dim strCurrentFilename As String Dim intSheetCount As Integer Dim objWord As Object Dim objDoc As Object 'Create a Word Object Set objWord = CreateObject("Word.Application") objWord.Visible = True 'Specify your folder path where each of the sheets 'will be saved as excel file 'Note: Change this path as required strFolderPath = "D:\WordFiles\" With Application 'Set ScreenUpdating to false. 'If it is true then the processing is much slower. .ScreenUpdating = False 'We DO NOT want Excel to display any alert messages 'when this code is running. DisplayAlerts = False 'Using For-Next Loop through each sheet and 'save it as a separate excel file, one by one For intSheetCount = 1 To Sheets.Count 'Activate the current sheet Sheets(intSheetCount).Activate 'Get the filename (Current Sheets Name) strCurrentFilename = ActiveSheet.Name 'Copy data in all the cells in the sheet Cells.Copy 'Open a new Word Doc File Set objDoc = objWord.Documents.Add With objDoc 'Paste the above copied data .Content.Paste 'Save the New File .SaveAs (strFolderPath & strCurrentFilename & ".docx") 'Close the file .Close End With 'Destroy the Doc Object Set objDoc = Nothing .CutCopyMode = False Next 'Destroy the Word Object Set objWord = Nothing 'Reset to Default. .ScreenUpdating = True .DisplayAlerts = True End With 'Display the appropriate message MsgBox "All the sheets saved as Word files successfully!", _ vbInformation, "Files saved successfully" End Sub Once all the sheets are saved as word files, a popup message displays: All the sheets saved as individual Word Files in the mentioned path. That ends this post. If you have any questions/comments, please write to me. You may also like to check the following posts: How to save each sheet as Excel File using Excel VBA?
